MODULAR PUMPHOUSES

WHATEVER YOUR NEEDS,
WE CAN BUILD IT!

MODULAR PUMP HOUSE

House and protect your pumping equipment.

ORCA's Modular Pumphouses are pre-engineered, self-contained units designed to house and protect pumping equipment in a wide range of fuel applications. Built for durability, flexibility, and efficiency, these turnkey solutions are ideal for remote sites, harsh environments or operations requiring rapid deployment.

Key features:

Pre-Fabricated Design:

Modular pumphouses are factory-assembled and tested before delivery, reducing on-site construction time and ensuring consistent quality.

Customizable Layouts:

Configurable to meet specific project requirements, including pump type, capacity, piping arrangements, and control systems.

Weatherproof Enclosures:

Constructed with durable materials such as steel or fiberglass to withstand extreme weather conditions and protect equipment from environmental damage.

Integrated Systems:

Can include electrical panels, HVAC, lighting, fire suppression, and monitoring systems for a complete plug-and-play solution.

Ease of Transport and Installation:

Designed for easy shipping and quick setup, often requiring minimal civil work or site preparation.

Enhanced Safety and Compliance:

Built to meet industry safety standards, with features like spill containment, explosion-proof components, and lockable access.

ORCA's Modular Pumphouses offer a cost-effective, reliable, and scalable solution for organizations seeking efficient pumping infrastructure with minimal downtime and maintenance.
